RELEVANT PROJECTS:

Talmira

Job Application Tracker

- Built a web app for users to browse job postings, apply online, and receive custom alerts.
- Designed and implemented RESTful APIs for authentication, subscription plans, and job posting management.
- Developed secure user authentication with JWT and password hashing.
- Integrated role-based access control for admin, recruiter, and applicant functionalities.
- Built responsive React.js front-end with form validation and state management.
- Implemented MongoDB schemas for users, jobs, and applications.
- Collaborated with a teammate using Git & GitHub for version control and project workflow.

CareSync

Hospital and Health Management App

- Developed a cross-platform mobile app using Flutter with a Django backend.
- Built features for patient health monitoring, hospital management, and appointment booking.
- Integrated SQLyog/MySQL for structured database management of patients, doctors, and appointments.
- Designed and deployed a companion web application for accessibility across devices.
- Implemented REST APIs to connect the mobile app with backend services.
- Collaborated on testing, debugging, and improving user experience.

SavBlood

Blood Bank Management

- Built a full-stack web application to manage blood donors, recipients, and inventory.
- Implemented CRUD operations with MongoDB and developed REST APIs using Express.js.
- Designed a responsive React.js front-end with form validation for donor/recipient registration.
- Added features for blood availability tracking and request management.
- Ensured secure authentication and authorization for users and admins.
- Collaborated with team members to test, debug, and deploy the application
